

# PowerMIFleet™

*Earn thousands in rebates for electrifying your fleet vehicles.*

PowerMIFleet is a program designed to help fleet owners and operators reduce operating costs, eliminate emissions, and simplify vehicle maintenance by transitioning to electric vehicles (EV). Earn a rebate up to \$7,500 when you install two (2) Level 2 charging ports, or up to \$15,000 for installing DC charge ports of 50kW or less.<sup>1</sup>

Count on us to connect your organization with the planning resources, expert guidance and financial incentives to easily and cost-effectively transition to an electric fleet with an electrification assessment.

## Why move to an electric fleet?

- EVs offer major fuel savings. Depending on the vehicle, EV drivers find themselves paying about \$1.30 per electric gallon (or eGallon)<sup>2</sup>.

- Fewer complex parts make EVs easier to maintain, which reduces downtime and operating costs.
- EVs have zero tailpipe emissions and a smaller carbon footprint.
- An EV fleet can be part of a larger strategy to reach your goals of being more sustainable.

## Is your business eligible? You must:

- Be a Consumers Energy commercial electric or combo customer.
- Own or lease the property.
- Own and use at least one light, medium or heavy-duty electric fleet vehicle(s).
- Agree to a separate meter and enroll on commercial [time of use \(TOU\) electric rate](#).

[1] Not all applicants will be selected. See terms and conditions for full details.
