

# Turn energy into savings

We want to compensate YOU for reducing energy use in our Commercial & Industrial Demand Response Program. Prepare with these easy energy reduction tips with minimal impact on your operations.

## Healthcare

- Run standby generation
- Turn off or turn down HVAC in non-essential areas

## Recycling

- Shut down baler, dryer unit and/or sorting machine
- Charge forklift batteries overnight

## Education

- Raise temperature and lower ventilation set points
- Consolidate summer classes to one building or wing

## Food Processing

- Curtail select packaging unit operations
- Pre-cool facility prior to Demand Response event

## Manufacturing

- Reduce equipment use to meet your energy reduction plan
- Delay heating/cooling processes

## Grocery

- Dim or turn off lights in refrigerators, freezers or back rooms
- Curtail anti-sweat heating systems

## Refrigerated Storage

- Raise freezer set points and pre-cool
- Run standby generation

## Better together: savings and sustainability

Check out these simple tips for reducing energy use in any industry. Together, we can support a more sustainable energy supply.

- Turn your thermostat up just 2 to 4 degrees. This provides a positive impact on energy savings with a minimal impact on comfort.
- Turn off lights in areas where daylighting is plentiful or in rooms where nobody is working.
- Reduce plug load equipment, such as unused computers or idle machinery.
- Work around Demand Response event hours. Start your manufacturing processes early to finish prior to 1 p.m. or delay the start until after 5 p.m.
