

Community EV Charging

Earn thousands in rebates when you bring EV charging to your community.

Electric vehicle (EV) registrations have tripled since 2020. Count on us to help your community stand out as an EV-friendly destination. Earn a rebate up to \$7,500 when you install two charging ports to help offset the cost of installing convenient on-site overnight charging.¹

Why add EV chargers?

Providing convenient overnight and weekend charging can draw EV driving travelers and residents looking for the right place to live, learn, shop, work and play.

Studies show that publicly accessible EV chargers attract new, loyal customers to local businesses and raise property values.

The future of transportation is electric. Having an established EV charging network will showcase your community as forward-thinking and prepared for the future.

On average, our rebates help communities save at least 50% of the cost to install charging. [Apply for a rebate today.](#)

How to qualify:

- Be a Consumers Energy commercial electric or combo customer.
- Install any UL Listed, ENERGY STAR® Certified Level 2 charger with at least two (2) plugs of 9.6 kW or less output, two (2) NEMA 14-50 outlets, or five (5) NEMA 5-20 outlets on 100 amps of service.
- Install chargers or outlets in a publicly accessible parking lot or curbside locations, within one to three blocks of a multifamily property or residential neighborhood.
- Agree to separate meter and enroll in a commercial [time of use \(TOU\) electric rate](#) to incentivize overnight charging.
- Agree to deploy signage provided by Consumers Energy to designate EV charging only parking spaces.

If you're ready to set your community apart with EV charging, act now.
