

Working Together on Michigan's Energy Future

What Is an Energy Supply Plan?

An Energy Supply Plan is a long-term plan for how we'll provide reliable and affordable energy to customers for the next 20 years.

Our Energy Supply Plan takes an all-of-the-above approach to supplying electricity. It combines renewable energy, efficient natural gas plants, and customer programs that reward energy savings. The result is reliable power, stable bills, and support for Michigan communities over the next 20 years.

**Competitively
Priced Solutions**

**Efficient
Generation**

**Community
Investments**

**Continued Clean
Energy Resources**

Why This Plan is Good for Michigan

- Adds fast-starting natural gas plants to keep energy reliable and affordable
- Expands clean energy while maintaining dependable backup power
- Limits land impact by using existing sites
- Creates thousands of construction jobs and supports communities across the state

How This Plan Impacts You

- Helps keep energy bills affordable using the lowest-cost power sources
- Provides reliable electricity for your home during peak demand and all weather
- Supports local schools, roads and emergency services through increased tax revenue
