

SAFETY BULLETIN

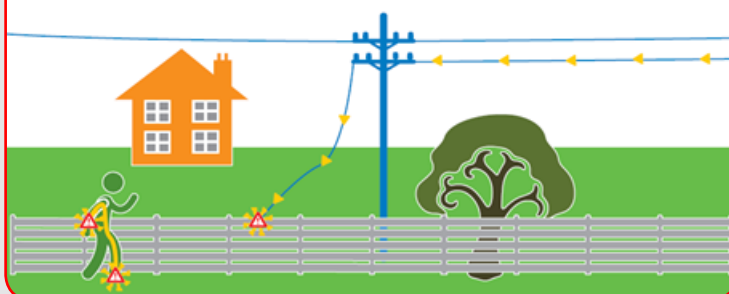

Downed Wire Safety for First Responders

Consumers Energy
Count on Us®

June 2017

ONLY CONSUMERS ENERGY employees are qualified to move or work on downed wires. Always assume all wires and equipment are energized, and make sure to always stay at least 25 feet away from the downed wire and anything it may be touching.

- Don't touch anything a line may be touching
- Don't be the path to the ground

BEWARE OF THESE EQUIPMENT HAZARDS

When working near downed wires, Consumers Energy recommends not using the following:

Rubber gloves – NOT to be used for moving wires! The rubber gloves that are used by Consumers Energy employees are tested regularly, specifically approved for working on our electric facilities and are designed to protect against electrocution.

Hot sticks – NOT to be used for moving wires! Hot sticks are used only to alert you if a vehicle or another object is energized. Make sure your tools are up to date and calibrated frequently. They are also shock sensitive.

Voltage testers – NOT to be used to test downed wires! Only use voltage testers for household current testing (inside the house, plugs, etc).

EMERGENCY OFFICIALS PORTAL

Find your local Public Safety Outreach and Damage Prevention representative and see who is on call at our Emergency Officials Portal.
