C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

CMS Energy Corporation (CMS Energy) is an energy company operating primarily in Michigan. It is the parent holding company of several subsidiaries, including its principal subsidiary, Consumers Energy Company (Consumers Energy or Company), an electric and natural gas utility serving about 6.7 million of Michigan’s 10 million residents, and CMS Enterprises Company (CMS Enterprises), primarily a domestic independent power producer. CMS Enterprises, through its subsidiaries and equity investments, is engaged in domestic independent power production, the marketing of independent power production, and the development and operation of renewable generation.

This report is ONLY for the principal subsidiary of CMS Energy, Consumers Energy.

Consumers Energy acknowledges that the long term sustainability of our Company depends upon our ability to listen to our stakeholders and conduct business that promotes environmental health, increases societal value, and brings economic success so that we can provide safe, reliable, and affordable energy to our customers. This commitment is advanced by our focus on the triple bottom line: people, planet and profit.

In 2017, Consumers Energy continued its commitment to sustainability by maintaining first quartile sustainability performance as compared to its peers and being ranked first among 54 U.S. utilities companies as assessed by Sustainalytics, a global leader in sustainability ratings, research and analysis, for the second consecutive year. Consumers Energy was also ranked as the top Michigan Company and ninth in the nation by Newsweek’s annual “Green Rankings”, a reflection of its commitment to environmental principles.

Consumers Energy took its sustainability commitment to the next level in 2017 by conducting a thorough stakeholder engagement process to inform its new Corporate Planet Breakthrough Goal. Consumers Energy adopted a goal to cut carbon emissions by 80 percent and eliminate coal for generating electricity by 2040.

This report is made as of the date hereof and contains “forward-looking statements” as defined in Rule 3b-6 of the Securities Exchange Act of 1934, Rule 175 of the Securities Act of 1933, and relevant legal decisions. The forward-looking statements are subject to risks and uncertainties and should be considered in the context of the risk and other factors detailed in CMS Energy’s and Consumers Energy’s SEC filings. Forward-looking statements should be read in conjunction with “FORWARD-LOOKING STATEMENTS AND INFORMATION” and “RISK FACTORS” sections of CMS Energy’s and Consumers Energy’s Form 10-K for the year ended December 31, 2017 and as updated in subsequent 10-Qs. CMS Energy’s and Consumers Energy’s “FORWARD-LOOKING STATEMENTS AND INFORMATION” and “RISK FACTORS” sections are incorporated herein by reference and discuss important factors that could cause CMS Energy’s and Consumers Energy’s results to differ materially from those anticipated in such statements. CMS Energy and Consumers Energy undertake no obligation to update any of the information presented herein to reflect facts, events or circumstances after the date hereof.
(C0.2) State the start and end date of the year for which you are reporting data.

C1.2a
(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored.

The Governance, Sustainability and Public Responsibility committee (a Committee of the Board of Directors) reviews sustainability items, as needed, and at least annually. Management and our board consider sustainability regularly in its decision making. Our board reviews the Corporation’s sustainability programs, practices and strategies, including our reporting as it relates to engagement with shareholders.

In addition to Board oversight, in 2018 management has implemented an Environmental Advisory Committee (“EAC”) in order to create a group of critical internal leaders who will work together to ensure our actions match our environmental goals.

A risk committee also exists that works with our Environmental Department to assess risks associated with climate related issues. Additionally, the Company has personnel responsible for sustainability that work across the company to identify and address climate related issues.

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?
Yes

C1.3a

(C1.3a) Provide further details on the incentives provided for the management of climate-related issues.

Who is entitled to benefit from these incentives?
All employees

Types of incentives
Recognition (non-monetary)

Activity incentivized
Other, please specify (All environmental enhancing activities )

Comment
The Company holds an annual sustainability awards ceremony where employees who have had a positive impact on the environmental are recognized for their efforts at our annual Sustainability Summit. This includes efforts around air, water, waste and land.

C2. Risks and opportunities

C2.1

C2.2b

(C2.2b) Provide further details on your organization's process(es) for identifying and assessing climate-related risks.

The Company has additional long term risk management processes with Board review. Our integrated resource planning ("IRP") process identifies and quantifies the impact of various risks with regards to providing reliable, cost effective, and environmentally friendly energy to our customers. Consumers Energy maintains a balanced portfolio of resource options to address any risks that the company may face. The IRP process addresses risk by evaluating numerous planning scenarios and sensitivities that potentially affect the business. For example, variables such as electric demand, fuel prices, state and federal mandates, carbon emission reduction scenarios and market conditions are altered to quantify risk.

On an asset level, physical climate change risks are assessed including the impact of changing weather on our operations. Risks from potential future environmental laws, rules and regulations are also evaluated.

C2.2c
(C2.2c) Which of the following risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Risk Type</th>
<th>Relevance &amp; Inclusion</th>
<th>Please Explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current regulation</td>
<td>Relevant, always included</td>
<td>Regulations that address GHG emissions are always taken into consideration when evaluating current risks related to generation.</td>
</tr>
<tr>
<td>Emerging regulation</td>
<td>Relevant, always included</td>
<td>Regulations that address GHG emissions are always taken into consideration when evaluating future risks related to generation.</td>
</tr>
<tr>
<td>Technology</td>
<td>Relevant, always included</td>
<td>Changes in technology and availability of technology can impact current and future operational plans and therefore are always assessed for risk and impact.</td>
</tr>
<tr>
<td>Legal</td>
<td>Relevant, always included</td>
<td>The Company always strives to maintain compliance with all laws and regulations. This is taken into consideration when evaluating risks associated with GHG generation.</td>
</tr>
<tr>
<td>Market</td>
<td>Relevant, always included</td>
<td>Understanding the market changes and new demands is critical for managing future and current risks to business success and sustainability.</td>
</tr>
<tr>
<td>Reputation</td>
<td>Relevant, always included</td>
<td>How the Company is perceived by its stakeholders can have a large impact on its ability to operate.</td>
</tr>
<tr>
<td>Acute physical</td>
<td>Relevant, always included</td>
<td>Acute risks that are event-driven, including increased severity of extreme weather events can increase operational and maintenance costs and therefore are included when assessing Company risks.</td>
</tr>
<tr>
<td>Chronic physical</td>
<td>Relevant, always included</td>
<td>Chronic risks including longer-term shifts in climate patterns can have impacts on current and future capacity planning and infrastructure.</td>
</tr>
<tr>
<td>Upstream</td>
<td>Relevant, always included</td>
<td>Risks associated with our supply chain such as fuel supply have the potential to be very disruptive to our business operations and therefore are always evaluated when assessing risks.</td>
</tr>
<tr>
<td>Downstream</td>
<td>Relevant, always included</td>
<td>Downstream risks that can be derived from our business operational such as risks associated with the use of our goods and services can impact the Company’s ability to operate and are always evaluated when assessing risks.</td>
</tr>
</tbody>
</table>

C2.2d

(C2.2d) Describe your process(es) for managing climate-related risks and opportunities.

Consumers Energy has an Enterprise Risk Management (“ERM”) Process to monitor and track potentially significant risks to our business. The ERM process requires business units to annually review, update and report risk profiles to senior management and the Board. This review includes identification of operational risks, financial risks, regulatory risks, strategic risks and risks associated with information/cyber systems. This process also includes carbon-related policy and relevant physical risks.

C2.3

(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes

C2.3a

(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.
Identifier
Risk 1

Where in the value chain does the risk driver occur?
Direct operations

Risk type
Transition risk

Primary climate-related risk driver
Policy and legal: Mandates on and regulation of existing products and services

Type of financial impact driver
Policy and legal: Increased operating costs (e.g., higher compliance costs, increased insurance premiums)

Company-specific description
Future policy to reduce greenhouse gas emissions through cap and trade scheme with an aggressive schedule may result in unreasonable emission allowance costs.

Time horizon
Short-term

Likelihood
Unlikely

Magnitude of impact
Medium

Potential financial impact
100000000

Explanation of financial impact
Future cap and trade programs could have an impact on our operations and the cost of electric generation from fossil fuels due to spending on emission allowance purchases for compliance or the capital cost of additional equipment. Costs of cleaner generating units or costs of advanced controls such as carbon capture and sequestration are estimated to exceed $1B/unit (costs would include capture of emissions and transportation to an appropriate sequestration site).

Management method
This risk is currently being managed through participation in both legislative and regulatory policy development, by strategy development, and by monitoring the development of control options through participation with industry research affiliations such as the Edison Electric Institute (EEI) and the IHS Markit. Another risk mitigant is related to our ability to mothball or retire select generating units and provide energy with new technology that meets potential new requirements. This option is subject to regulatory approval.

Cost of management
474000000

Comment
Company anticipates spending about $474 million to decommission its remaining coal-fired plant.

Identifier
Risk 2

Where in the value chain does the risk driver occur?
Direct operations

Risk type
Transition risk

Primary climate-related risk driver
Policy and legal: Mandates on and regulation of existing products and services

Type of financial impact driver
Policy and legal: Increased operating costs (e.g., higher compliance costs, increased insurance premiums)

Company-specific description
The EPA regulations over existing fossil fuel-fired units under Section 111(d) of the Clean Air Act is dependent on a state run program. These programs will require increases in generation efficiency, artificial changes in dispatch order, additional capital investment in renewable energy sources and a likely increase in energy efficiency activities. In February 2016, the Supreme Court
of the United States issued a judicial stay of these regulations. Furthermore, the Trump Administration is presently reconsidering these rules. Consumers Energy is closely tracking these ongoing developments.

**Time horizon**
Short-term

**Likelihood**
Likely

**Magnitude of impact**
Medium-high

**Potential financial impact**

**Explanation of financial impact**
Being required to substantially increase efficiency at existing plants could result in significant costs.

**Management method**
This risk is currently being managed through participation in both legislative and regulatory policy development, by strategy development, and by monitoring the development of control options through participation with industry research affiliations such as the Edison Electric Institute (EEI) and the IHS Markit. Another risk mitigant is related to our ability to mothball or retire select generating units and provide generation with new technology that meets any new requirements. This option is subject to regulatory approval.

**Cost of management**
200000

**Comment**
The Company spends $200k/yr on participating in policy and strategy development.
development, by business forecasting and by monitoring the development of control options through participation with industry research affiliations such as the Edison Electric Institute (EEI) and the IHS Markit. Another risk mitigant is related to our ability to mothball or retire select generating units and provide generation with new technology that meets any new requirements. This option is subject to regulatory approval.

**Cost of management**
474200000

**Comment**
The Company spends $200k/yr on participating in policy and strategy development. Company anticipates spending about $474 million to decommission its remaining coal-fired plant.

---

**Identifier**
Risk 4

**Where in the value chain does the risk driver occur?**
Direct operations

**Risk type**
Transition risk

**Primary climate-related risk driver**
Policy and legal: Mandates on and regulation of existing products and services

**Type of financial impact driver**
Technology: Capital investments in technology development

**Company-specific description**
Modifications at our existing facilities required to meet GHG regulations will likely trigger additional permitting requirements. The permitting process can be a very lengthy, litigious and cost intensive process.

**Time horizon**
Short-term

**Likelihood**
Likely

**Magnitude of impact**
High

**Potential financial impact**
1000000000

**Explanation of financial impact**
Based on the EPA’s GHG performance standards for existing electric generating units, Consumers Energy may be forced to make costly upgrades on the existing fleet and or retire certain units. These costs would vary depending on the timeline for compliance and the facility. These costs are estimated to be in excess of $1 billion.

**Management method**
A method to manage this risk may be retiring and replacing plants with lower carbon alternatives. Additionally, we manage this risk through participation in both legislative and regulatory policy development, by strategy development, and by monitoring the development of control options through participation with industry research affiliations such as the Edison Electric Institute (EEI) and the IHS Markit.

**Cost of management**
474200000

**Comment**
The Company spends $200k/yr on participating in policy and strategy development. Company anticipates spending about $474 million to decommission its remaining coal-fired plant.

---

**Identifier**
Risk 5

**Where in the value chain does the risk driver occur?**
Direct operations

**Risk type**
Physical risk
Primary climate-related risk driver
Chronic: Changes in precipitation patterns and extreme variability in weather patterns

Type of financial impact driver
Increased operating costs (e.g., inadequate water supply for hydroelectric plants or to cool nuclear and fossil fuel plants)

Company-specific description
Snow and ice accumulation, coupled with strong winds from more frequent or severe storms may compromise infrastructure by damaging our distribution system equipment.

Time horizon
Current

Likelihood
About as likely as not

Magnitude of impact
Low

Potential financial impact
35500000

Explanation of financial impact
Damages to our infrastructure due to more frequent and severe storms may increase the Company's service restoration operations and maintenance costs. For 2016, Consumers Energy spent $35.5 million on service restoration operating and maintenance activities. We estimate that in 2017 we will spend about $39.5 million in service restoration activities.

Management method
This risk can partly be managed by smart electric systems that have self-healing designs. This risk is also mitigated by maintaining our infrastructure in good working order.

Cost of management
878900000

Comment
Consumers Energy's Smart Energy program, kicked off in 2007, is in the implementation stage. The Company spent $711M on the program in 2017. Also in 2017, the Company spent over $3.2 million on our reliability operations and maintenance program, $50.3 million on our line clearing operations and maintenance program, and $114.4 million on our reliability capital program.

Identifier
Risk 6

Where in the value chain does the risk driver occur?
Direct operations

Risk type
Physical risk

Primary climate-related risk driver
Chronic: Other

Type of financial impact driver
Increased operating costs (e.g., inadequate water supply for hydroelectric plants or to cool nuclear and fossil fuel plants)

Company-specific description
Variations in Great Lakes water level may result in increased dredging activities as well as more frequent unloading of coal due to reduced cargo capacity.

Time horizon
Short-term

Likelihood
About as likely as not

Magnitude of impact
Low

Potential financial impact
2000000
Explanation of financial impact
Changes in the level of the Great Lakes and its tributaries could have a significant financial impact on our generating fleet due to increased dredging or greater fuel costs due to operation of coal barges at less than capacity to meet requirements of shallower channels. Dredging would result in significant costs (~$2M per site/yr.). Water level changes are predicted to occur over a very long period and existing generating assets could likely be mothballed, retired or replaced by that time. Additionally, recent, and upcoming changes in other EPA regulations are expected to require changes to be made at our existing water structures. Any changes would evaluate the best data on expected lake levels.

Management method
The Company is currently managing this risk by monitoring lake levels at our generating plants and also relies on the United States Army Corps of Engineers Detroit District's water level reports and forecasts.

Cost of management
0

Comment
There is virtually no cost ($0) associated with the monitoring of lake levels at our generating plants. The Company utilizes the United States Army Corps of Engineers Detroit District's water level reports and forecasts at no cost.

Identifier
Risk 7

Where in the value chain does the risk driver occur?
Customer

Risk type
Transition risk

Primary climate-related risk driver
Reputation: Increased stakeholder concern or negative stakeholder feedback

Type of financial impact driver
Reputation: Reduction in capital availability

Company- specific description
Consumers Energy’s efforts to mitigate climate change through policies and practices can affect the perception of our Company. If our reputation is damaged due to inadequate efforts surrounding climate change this may reduce our appeal in the investment community.

Time horizon
Short-term

Likelihood
Unlikely

Magnitude of impact
Low

Potential financial impact
4000000000

Explanation of financial impact
There is a growing concern for investing in companies that address environmental issues such as climate change. Over 40% of our common stock is owned by signatories of the United Nation’s Principles for Responsible Investing which represents over $4B dollars. It is important for our Company that investors are confident in our business now and in the future.

Management method
To manage this risk the Company communicates its efforts surrounding climate change through public reporting. The Company uses its Corporate Social Responsibility website as a tool to inform the public about its environmental efforts regarding climate change. Additionally, the Company discloses climate change information through its Form 10-K annual report as well as this response to the Carbon Disclosure Project (CDP) and our annual Sustainability Report.

Cost of management
975

Comment
There are no additional costs ($0) associated with disclosing our efforts on climate change on the Company website or in its SEC Form 10-K annual report. The cost associated with personnel hours worked to achieve these disclosures has not been calculated. The Carbon Disclosure Project submittal fee is $975.
Identifier
Risk 8

Where in the value chain does the risk driver occur?
Customer

Risk type
Transition risk

Primary climate-related risk driver
Market: Changing customer behavior

Type of financial impact driver
Market: Increased production costs due to changing input prices (e.g., energy, water) and output requirements (e.g., waste treatment)

Company-specific description
Regulatory, physical, and other risks driven by climate change have the potential to impact the economy driving costs up for our business and our customers and consequently driving the demand for our goods and services down.

Time horizon
Short-term

Likelihood
More likely than not

Magnitude of impact
Low

Potential financial impact
30400000

Explanation of financial impact
Higher energy costs could result in more households not being able to afford their energy bills. In 2017, the Company's uncollectible expense was $28M.

Management method
To help reduce the amount of uncollectible payments the Company provided funds to non-profit agencies and secured grants and other energy assistance from its customers through the MPSC. Additionally, the Company offers different payment plan options to its customers.

Cost of management
14600000

Comment
In 2017, the Company provided $1.4M to the Salvation Army PeopleCare Program partnership for energy assistance and $13.2M to the Michigan Energy Assistance Program. Overall, Consumers Energy customers received nearly $64M of energy assistance from different government and non-profit agencies together with Company contributions. In collaboration with community stakeholder, Consumers Energy promotes the availability and customer connections to access energy assistance the Company provided.

C2.4

(C2.4) Have you identified any climate-related opportunities with the potential to have a substantive financial or strategic impact on your business?
Yes

Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Energy source

Primary climate-related opportunity driver
Participation in carbon market

Type of financial impact driver
Returns on investment in low-emission technology

Company- specific description
The Company has participated in an EPA acid rain cap and trade program by selling emission allowances accrued from operational changes which reduced emissions. The Company has profited from these sales. There may be opportunities to capitalize on emission allowance sales from future cap and trade schemes targeting GHG emissions.

Time horizon
Short-term

Likelihood
About as likely as not

Magnitude of impact
Medium-low

Potential financial impact

Explanation of financial impact
Astute management of cap and trade schemes delivers good customer value and can increase our competitive position in the market. At this time, it is not possible to quantify the scope of financial implications due to the lack of known operating parameters of a yet to be developed trading program.

Strategy to realize opportunity
We have identified opportunities to be competitive in a cap and trade schedule including negative cost of abatement opportunities such as plant efficiency, electric transmission line loss reductions and energy efficiency for our customers.

Cost to realize opportunity

Comment
The capital invested depends upon the stringency of the policy.

Identifier
Opp2

Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Energy source

Primary climate-related opportunity driver
Use of lower-emission sources of energy

Type of financial impact driver
Returns on investment in low-emission technology

Company- specific description
Efficiency standards for electric generation provide an opportunity to invest in our current generating fleet or to retire and build new low to zero carbon emitting sources. As a regulated utility, we recover a rate of return on investments in infrastructure which includes required emission control equipment or new generation equipment.

Time horizon
Medium-term

Likelihood
Very likely
**Magnitude of impact**
Medium-low

**Potential financial impact**

**Explanation of financial impact**
The potential impact of product efficiency opportunities is dependent upon the stringency of the federal policy. Because these are case specific applications for our generating assets, it is not possible to determine a monetary value without assessing each application.

**Strategy to realize opportunity**
Our Clean Energy Plan is a living process that looks at policy, load, technology and fuel prices to name a few variables, several times per year, providing a picture of the most cost effective way to serve load.

**Cost to realize opportunity**
0

**Comment**
Changes in carbon regulation will not result in any additional costs ($0) to our strategic modelling processes.

**Where in the value chain does the opportunity occur?**
Direct operations

**Opportunity type**
Energy source

**Primary climate-related opportunity driver**
Use of lower-emission sources of energy

**Type of financial impact driver**
Returns on investment in low-emission technology

**Company-specific description**
There are potential opportunities for our natural gas utility business. EPA regulations could drive the need for new natural gas infrastructure to support more gas fired EGUs. Investments in our natural gas distribution network may realize profit if infrastructure is needed.

**Time horizon**
Short-term

**Likelihood**
Very likely

**Magnitude of impact**
Medium

**Potential financial impact**
1000000

**Explanation of financial impact**
Investments in the existing natural gas distribution system could increase the Company’s assets. If new natural gas-fired electrical generation facilities come on-line in our service territory we will have the opportunity to invest in new natural gas infrastructure. In 2017, the Company increased revenues an estimated $1M from new customers for natural gas distribution.

**Strategy to realize opportunity**
Our Clean Energy Plan is a living process that looks at policy, load, technology and fuel prices to name a few variables, several times per year, providing a picture of the most cost effective way to serve load.

**Cost to realize opportunity**
41100000

**Comment**
In 2017, $41,100,000 was spent on the Company’s customer attachment program on new main extensions.

---

**Identifier**
Opp4

---
Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Products and services

Primary climate-related opportunity driver
Development and/or expansion of low emission goods and services

Type of financial impact driver
Increased revenue through demand for lower emissions products and services

Company-specific description
Change in weather can affect electric or gas load. Warmer winters result in a decreased demand for gas and conversely warmer summers mean an increase in demand for electricity.

Time horizon
Current

Likelihood
About as likely as not

Magnitude of impact
Medium-low

Potential financial impact
100000000

Explanation of financial impact
An increase in electricity or natural gas demand allows us to expand our supply and distribution systems. Our investment opportunity is dependent upon the magnitude of the change in temperature and could be as much as $1B.

Strategy to realize opportunity
We are supportive of revenue decoupling on both the electric and gas sides of the business, which effectively mitigate weather risk by truing up projected sales with actual sales and giving customers refunds or collecting more revenue accordingly. We are authorized to do this on the gas side only, decoupling on the electric side is not currently authorized.

Cost to realize opportunity
0

Comment
There is no additional cost ($0) to manage this opportunity through our current business processes.

Products and services

Primary climate-related opportunity driver
Development of climate adaptation and insurance risk solutions

Type of financial impact driver
Increased revenue through new solutions to adaptation needs (e.g., insurance risk transfer products and services)

Company-specific description
Snow and ice from more frequent or severe storms may compromise infrastructure by damaging our distribution system equipment. There may be new investment opportunities associated with the solutions to these problems.

Time horizon
Short-term

Likelihood
About as likely as not

Magnitude of impact
Medium-high
Potential financial impact
31500000000

Explanation of financial impact
The deployment of a complete electric underground distribution system would roughly cost around $31.5 Billion. This is based on an adjusted line mileage of 56,676 miles of electric underground lines at a rough cost of $561,000 per mile.

Strategy to realize opportunity
At the current time, we are investing in our infrastructure to assure the reliable supply of electricity and natural gas.

Cost to realize opportunity
167900000

Comment
In 2017, the Company spent over $3.2 million on our reliability operations and maintenance program, $50.3 million on our line clearing operations and maintenance program, and $114.4 million on our reliability capital program.

Identifier
Opp6

Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Markets

Primary climate-related opportunity driver
Other

Type of financial impact driver
Other, please specify (Additional access to capital)

Company-specific description
Positive perceptions driven Shortby our response to climate change may increase the appeal of our business in the investment community.

Time horizon
Short-term

Likelihood
Likely

Magnitude of impact
Low

Potential financial impact
4000000000

Explanation of financial impact
There is a growing concern for investing in companies that address environmental issues such as climate change. Over 40% of our common stock is owned by signatories of the United Nation's Principles for Responsible Investing which represents over $4B dollars. It is important for our Company that investors are confident in our business now and in the future.

Strategy to realize opportunity
The Company manages this risk with its efforts around reducing its carbon through building efficiency, electric vehicle incentives, transitioning our generation fleet to a lower carbon intensity rating, behavioral change support, and energy efficiency processes. Additionally, the Company reports out on these efforts through our Corporate Social Responsibility Webpage, SEC Form 10K Annual Report, and the CDP to communicate them to the investment community.

Cost to realize opportunity
975

Comment
There are no additional costs ($0) associated with disclosing our efforts on climate change on the Company website or in its SEC Form 10-K annual report. The cost associated with personnel hours worked to achieve these disclosures has not been calculated. The Carbon Disclosure Project submittal fee is $975.

Identifier

Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Products and services

Primary climate-related opportunity driver
Development and/or expansion of low emission goods and services

Type of financial impact driver
Increased revenue through demand for lower emissions products and services

Company-specific description
Positive perceptions driven by our response to climate change may increase the appeal of our business in the investment community. Customers may perceive their energy usage as a contributor to climate change. This perception may cause our customers to demand new lower carbon products and services.

Time horizon
Current

Likelihood
More likely than not

Magnitude of impact
Low

Potential financial impact
877205

Explanation of financial impact
Our Green Generation® program offers our customers the opportunity to make contributions towards the purchases of renewable energy. Customers can either make purchases that match their kilowatt-hour usage at the 100% level, or can purchase in blocks of 150 kilowatt-hours. At the end of 2017, the Green Generation® program generated about $877,205 in revenue.

Strategy to realize opportunity
The Company manages this opportunity by marketing the program to our customers. We communicate with these customers through a number of different methods, including direct mail, email, radio and television, and web banner ads. The Green Generation® direct mail marketing efforts are generally focused on residential customers – particularly those whom demonstrate an interest in renewable energy and the environment – as these customers are more likely to sign up for the Green Generation® program.

Cost to realize opportunity
725218

Comment
Company spent about $725,218 on marketing, administration and supply for this program in 2017.

Indicate whether your organization has developed a low-carbon transition plan to support the long-term business strategy.
Yes

C3.1c

(C3.1c) Explain how climate-related issues are integrated into your business objectives and strategy.

Consumers Energy is committed to sustainability which means focusing on the triple bottom line (people, planet, profit). With each decision made, the Company considers our impact on all of our stakeholders. Consumers President and Chief Executive Officer and leadership team own the sustainability business strategy but also have personnel assigned to manage climate change issues, which includes policy and regulation development, analysis, planning and communication. Company personnel, in conjunction with the Company’s management team and the Board of Directors develop the Company’s strategy on climate change as a component of the Company’s overall business strategy.

Point of view documents that explain the current anticipated impact on the Company from a proposed climate change related regulation are also developed and shared with management and distributed through the Company as needed. Additionally, Consumers Energy has a Corporate Sustainability Breakthrough Goal. Under this sustainability goal, Consumers Energy further developed the existing corporate GHG reduction target, which was met in 2016 with the retirement of 950 MW of coal generation. In 2017, the Company began extensive stakeholder outreach to best determine how to meet the customer needs with a Corporate Planet Breakthrough Goal which was developed in 2017 and announced in early 2018. The Company also received an investor request in November of 2017 to publish a climate assessment report. The Company is currently working to finalize this report.

The President and Chief Executive Officer communicates our climate change and sustainability strategy to the Company’s employees and Board through presentations, Company policies and ultimately in our decisions. The climate change and sustainability strategy is also reflected in external communications made through, among other things, financial and regulatory reporting, news releases, our website, the annual Sustainability Report, and the CDP.

Aspects of climate change that have influenced our business strategy include proposed federal legislation as well as state and U.S. Environmental Protection Agency (EPA) regulation governing emissions of GHG and also social pressure, including the investment community, to consider further reducing GHG emissions from our operations.

We have numerous short term business strategies to reduce GHG emissions such as modernizing our natural gas pipeline infrastructure, which reduces fugitive methane emissions, as well as building efficiency standards for any new construction. Modernizing our natural gas pipelines started in 2012 and will continue until approximately 2036. Consumers Energy is a partner to the EPA’s Natural Gas STAR Program since 1996. As part of our natural gas business, we look for opportunities to reduce methane releases from the storage and delivery of natural gas. We have received two “Continuing Excellence” awards for our voluntary measures to reduce methane emissions under the Natural Gas Star Program.

Additionally, Consumers Energy joined the Natural Gas STAR Methane Challenge Program as a Founding Member in 2016. The Company became a partner under the program’s Natural Gas Distribution Segment: Mains – Cast Iron and Unprotected Steel Best Management Plan (BMP) Commitment. Our goal under this BMP is a 3% or greater reduction in cast iron and unprotected steel distribution mains, for a five year period, beginning in 2016. Consumers Energy filed their Methane Challenge Implementation Plan in September of 2016. Future performance for this commitment will closely parallel existing work projected to be done under the Enhanced Infrastructure Replacement Program (EIRP). Reporting of the Methane Challenge Commitment progress will utilize data
the Company gathers for our compliance obligations under the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration regulations found in 49 CFR Part 191.

Additionally, approximately 1,820,000 smart meters have been installed by the end of 2017. In 2016, we completed all new systems functionality associated with the meters which includes electronic meter reads which will eliminate estimated reads, enhance energy efficiency program participation and remote turn on turn off of electric meters.

Aspects of climate change have also influenced our long term strategies through our capacity planning process. In this process we evaluate a number of factors including an estimated carbon price for CO2 emissions in our generation capacity planning. Future generation planning incorporates this business strategy to make sound business decisions. For example, in 2016 Consumers Energy retired seven coal fired power plants, which comprised approximately one third of our coal fleet. This was the most substantial business decision influenced by this capacity planning process.

Our long-term strategy also includes building and operating at least 306 MW of new wind generation by 2022, long-term power purchase agreements for renewables, and implementation of a customer energy efficiency program. Our efficiency program was initiated through state legislation in 2008 and an updated state legislative package was signed in December 2016. While the statute has numerous mandates and goals which the Company has met, the efficiency gains will continue into the future and is expected to reduce total customer electricity use by at least 1.5% annually and gas use by 1% annually.

In 2015, EPA finalized the Clean Power Plan (CPP), a suite of regulations targeting carbon dioxide emissions from existing fossil fuel plants. In 2017 the Company continued to evaluate the potential short and long term implications from the ongoing activities surrounding the CPP, even in light of the February 2016 decision by the Supreme Court of the United States to stay the implementation of the CPP.

One particular competitive advantage of factoring climate change into our business strategy is that it promotes diversity of our electrical generation portfolio, which leads to an overall reduction of risk associated with price volatility inherent with operating a generating fleet dominated by one technology. Maintaining a diverse generation fleet allows our ratepayers to be better insulated from price swings associated with any one particular generating technology or fuel source.

With the implementation of our triple bottom line we have moved from a compliance driven organization to an accountability driven organization where consideration of the impacts of our operations influence our future decisions; such as in the area of generation planning and evaluating new technologies. This culture change is being carried out under the umbrella of our commitment to the triple bottom line; people, planet and prosperity.

Disclose details of your organization's low-carbon transition plan.

In 2017 Consumers Energy developed a Corporate Planet Breakthrough Goal. Under this goal, Consumers Energy further developed the existing corporate GHG reduction target, which was met in 2016 with the retirement of 950 MW of coal generation. In 2017, the Company began extensive stakeholder outreach to best determine how to meet the customer needs. This outreach included surveys of customers as well as interviews with key stakeholders. The results clearly indicated a preference for a lower carbon future with an emphasis on renewable energy generation. In 2018 the Company announced a goal to reduce carbon dioxide emissions 80 percent and eliminate all remaining coal generation by 2040. Our plans to meet this goal are outlined in our Integrated Resource Plan.

Please explain
Our Enhanced Infrastructure Replacement Program (EIRP) targets higher risk distribution mains and services to be replaced. Through this effort, in 2017 we reduced potential methane emissions by 9,765 Mcf, which equals ~ 6,600 metric tons of CO2e. In 2016, Consumers Energy also became a founding member in EPA’s voluntary Methane Challenge program, where members commit to utilizing best management practices to reduce fugitive methane losses from distribution and transmission processes. Our methane challenge commitment is to reduce cast iron and unprotected steel mains at a minimum rate of 3% per year, for a 5-year period. This is a voluntary initiative that reduces Scope 2 emissions.

Part of emissions target
This is not a part of an emissions target because it is an infrastructure replacement target.

Is this target part of an overarching initiative?
No, it's not part of an overarching initiative

Through 2017 Consumer Energy has contracted for the purchase of approximately 656.5 MW of nameplate capacity from renewable energy suppliers. In 2017, these renewable energy sources contributed to a reduction of 1,466,916 metric tonnes of CO2 emissions. Scope 1 emissions are reduced from these efforts. This is part of a mandatory effort to comply with a 2008 state statute. This initiative is not restricted to the reporting year only and is expected to reduce greenhouse gas emissions annually. Therefore this initiative is considered to be continuous.

We have been an EPA Natural Gas STAR Program Partner since 1996. The Natural Gas STAR Program is a voluntary program to identify and address fugitive emissions of methane. As part of our natural gas business, we look for opportunities to reduce methane releases from the storage and delivery of natural gas. We received a “Continuing Excellence Award” in both 2007 and 2009 for our voluntary measures to reduce methane releases. These measures include capturing and injecting natural gas back into our natural gas system while performing maintenance on our pipelines, replacing components and implementing best management practices to reduce venting. In 2017, these efforts helped reduce methane emissions by 149,150 Mcf. This is a voluntary initiative that reduces Scope 1 and Scope 3 emissions. This initiative is not restricted to the reporting year only and is expected to reduce greenhouse gas emissions annually. Therefore this initiative is considered to be continuous.

C-EU4.6

(C-EU4.6) Describe your organization’s efforts to reduce methane emissions from your electricity generation activities.

The Company focuses on optimizing combustion processes as well as eliminating leaks occurring from infrastructure that delivers natural gas to the combustion facilities.

C-OG4.6

(C-OG4.6) Describe your organization’s efforts to reduce methane emissions from oil and gas production activities.

Consumers Energy does not operate any oil and gas production sites. Our natural gas utility has storage and distribution assets. The Company prioritizes efforts to reduce fugitive methane losses from these assets. We quantify and report these fugitive loses pursuant to the EPA GHG reporting rule Subpart W.

COG4.7

(C-OOG4.7) Does your organization conduct leak detection and repair (LDAR) or use other methods to find and fix fugitive methane emissions from oil and gas production activities?

No, this is not relevant to our operations.

C-OG4.7b

(C-OG4.7b) Explain why you do not conduct LDAR or use other methods to find and fix fugitive methane emissions, and whether you have a plan to do so from your oil and gas production activities.

Consumers Energy does not operate any oil and gas production sites. Our natural gas utility has storage and distribution assets. The Company prioritizes efforts to reduce fugitive methane losses from these assets. We quantify and report these fugitive loses pursuant to the EPA GHG reporting rule Subpart W.

C-OG4.8

(C-OG4.8) If flaring is relevant to your oil and gas production activities, describe your organization’s efforts to reduce flaring, including any flaring reduction targets.

Consumers Energy does not operate any oil and gas production sites. Our natural gas utility has storage and distribution assets. The Company prioritizes efforts to reduce fugitive methane losses from these assets. We quantify and report these fugitive loses pursuant to the EPA GHG reporting rule Subpart W.

C5. Emissions methodology

C5.1
(C5.1) Provide your base year and base year emissions (Scopes 1 and 2).

Scope 1

Base year start
January 1 2009

Base year end
December 31 2009

Base year emissions (metric tons CO2e)
18196261

Comment

Scope 2 (location-based)

Base year start
January 1 2009

Base year end
December 31 2009

Base year emissions (metric tons CO2e)
44330

Comment

Scope 2 (market-based)

Base year start
Base year end

Base year emissions (metric tons CO2e)

Comment

C5.2

(C5.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate Scope 1 and Scope 2 emissions.

The Greenhouse Gas Protocol: Public Sector Standard
US EPA Mandatory Greenhouse Gas Reporting Rule

C6. Emissions data

C6.1

(C6.1) What were your organization’s gross global Scope 1 emissions in metric tons CO2e?

Row 1

Gross global Scope 1 emissions (metric tons CO2e)
13046393

End-year of reporting period
<Not Applicable>

Comment
C6.2

(C6.2) Describe your organization’s approach to reporting Scope 2 emissions.

Row 1

**Scope 2, location-based**
We are reporting a Scope 2, location-based figure

**Scope 2, market-based**
We have no operations where we are able to access electricity supplier emission factors or residual emissions factors and are unable to report a Scope 2, market-based figure

**Comment**
As noted in the introduction, this report is limited to owned generation assets operating under Consumers Energy. Therefore, market based Scope 2 emissions profiles are not applicable.

C6.3

(C6.3) What were your organization’s gross global Scope 2 emissions in metric tons CO2e?

Row 1

**Scope 2, location-based**
56659

**Scope 2, market-based (if applicable)**
<Not Applicable>

**End-year of reporting period**
<Not Applicable>

**Comment**
Prior to 2017 natural gas usage at Consumers Energy facilities were reported under scope 1 emissions. For the 2017 report we determined that they are better represented under scope 2 emissions. This accounting change shows up as a portion of the increase of 2017 scope 2 emissions.

C6.4

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

Yes

C6.4a
(C6.4a) Provide details of the sources of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure.

**Source**
Refrigerant leaks

**Relevance of Scope 1 emissions from this source**
Emissions are not relevant

**Relevance of location-based Scope 2 emissions from this source**
No emissions from this source

**Relevance of market-based Scope 2 emissions from this source (if applicable)**
No emissions from this source

**Explain why the source is excluded**
GHGs associated with refrigerant usage are contained in closed loop applications. Any leakage associated with closed loop refrigerant systems is de minimus and not required to be reported via regulation.

---

C6.5

(C6.5) Account for your organization’s Scope 3 emissions, disclosing and explaining any exclusions.

**Purchased goods and services**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
13936695

**Emissions calculation methodology**
Emissions are calculated based on the distribution and sale of natural gas to customers. Calculations were based on 40 CFR Part 98 emission factors.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**
Because the calculated carbon emissions resulting from customers’ use of delivered natural gas will make up the overwhelming majority of total carbon emissions, it was deemed not prudent to audit all of the Company's natural gas suppliers for their value chain impact.

**Capital goods**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
242510

**Emissions calculation methodology**

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**
Because the calculated carbon emissions resulting from customers’ use of delivered natural gas will make up the overwhelming majority of total carbon emissions, it was deemed not prudent to audit all of the Company's natural gas suppliers for their value chain impact.
Fuel-and-energy-related activities (not included in Scope 1 or 2)

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**

**Emissions calculation methodology**

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**

**Explanation**
All fuel and energy related activities are either captured as purchased goods and services, capital goods or upstream transportation and distribution.

**Upstream transportation and distribution**

**Evaluation status**
Relevant, not yet calculated

**Metric tonnes CO2e**

**Emissions calculation methodology**

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**

**Explanation**
Because the calculated carbon emissions resulting from customers' use of delivered natural gas will make up the overwhelming majority of total carbon emissions, it was deemed not prudent to audit all of the Company's natural gas suppliers for their value chain impact.

**Waste generated in operations**

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**

**Emissions calculation methodology**

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**

**Explanation**
Our energy customers do not accumulate waste as a result of the use of our product (use of electricity or combustion of natural gas).

**Business travel**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
7044

**Emissions calculation methodology**
Emissions are calculated based on business mileage associated with employees driving vehicles for work related purposes. Calculations were based on 40 CFR Part 98 emission factors.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**
Data was gathered from actual mileage recorded on fleet vehicles, as well as those miles submitted for reimbursement due to business travel.
Employee commuting

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**

**Emissions calculation methodology**
Percentage of emissions calculated using data obtained from suppliers or value chain partners

**Explanation**
Employee commuting is currently outside of the Company's influence.

Upstream leased assets

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**

**Emissions calculation methodology**
Percentage of emissions calculated using data obtained from suppliers or value chain partners

**Explanation**
Not applicable to our business model.

Downstream transportation and distribution

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**

**Emissions calculation methodology**
Percentage of emissions calculated using data obtained from suppliers or value chain partners

**Explanation**
Captured in disclosed scope 3 emissions from Capital Goods.

Processing of sold products

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**

**Emissions calculation methodology**
Percentage of emissions calculated using data obtained from suppliers or value chain partners

**Explanation**
The life cycle of GHG emissions associated with the use of our sold products are captured in the purchased goods and services category.

Use of sold products

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**

**Emissions calculation methodology**
Percentage of emissions calculated using data obtained from suppliers or value chain partners

**Explanation**
The life cycle of GHG emissions associated with the use of our sold products are captured in the purchased goods and services category.
End of life treatment of sold products

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e

Emissions calculation methodology

Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation
The life cycle of GHG emissions associated with the use of our sold products are captured in the purchased goods and services category.

Downstream leased assets

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e

Emissions calculation methodology

Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation
Not applicable to our business model.

Franchises

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e

Emissions calculation methodology

Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation
The franchise business model is not applicable to a regulated utility.

Investments

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e

Emissions calculation methodology

Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation
Not applicable to our business model.

Evaluation status

Metric tonnes CO2e

Emissions calculation methodology

Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation
Other (downstream)

Evaluation status

Metric tonnes CO2e

Emissions calculation methodology

Percentage of emissions calculated using data obtained from suppliers or value chain partners

Explanation

C6.7

(C6.7) Are carbon dioxide emissions from biologically sequestered carbon relevant to your organization?

No

C6.10

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
0.00211

Metric numerator (Gross global combined Scope 1 and 2 emissions)
13103053

Metric denominator
unit total revenue

Metric denominator: Unit total
6222000000

Scope 2 figure used
Location-based

% change from previous year
2.22

Direction of change
Increased

Reason for change
One reason for the slight increase observed is that the 2016 revenue totals inadvertently used the parent company's total revenue and not Consumers Energy's revenue.

Intensity figure
1748

Metric numerator (Gross global combined Scope 1 and 2 emissions)
13103053

Metric denominator
full time equivalent (FTE) employee

Metric denominator: Unit total
7496

Scope 2 figure used
Location-based

% change from previous year
2.34
### Direction of change
Decreased

### Reason for change
There were more FTEs reported for 2017 than 2016.

<table>
<thead>
<tr>
<th>Intensity figure</th>
<th>0.814</th>
</tr>
</thead>
</table>

**Metric numerator (Gross global combined Scope 1 and 2 emissions)**
13103053

**Metric denominator**
megawatt hour generated (MWh)

**Metric denominator: Unit total**
16088000

**Scope 2 figure used**
Location-based

### % change from previous year
1.33

### Direction of change
Increased

### Reason for change
The observed change was so close to 2016 values that there are not reasons identified.

---

### C-OG6.12

(C-OG6.12) Provide the intensity figures for Scope 1 emissions (metric tons CO2e) per unit of hydrocarbon category.

**Unit of hydrocarbon category (denominator)**
Please select

**Metric tons CO2e from hydrocarbon category per unit specified**

**% change from previous year**

**Direction of change**
<Not Applicable>

**Reason for change**

**Comment**

---

### C-OG6.13

(C-OG6.13) Report your methane emissions as percentages of natural gas and hydrocarbon production or throughput.

---

### C7. Emissions breakdowns

---

### C7.1
C7.1 Does your organization have greenhouse gas emissions other than carbon dioxide?
Yes

C7.1a

(C7.1a) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used greenhouse warming potential (GWP).

<table>
<thead>
<tr>
<th>Greenhouse gas</th>

(C8.2d) List the average emission factors of the fuels reported in C8.2c.

**Coal**

**Emission factor**

**Unit**

Please select

**Emission factor source**

Consumers Energy primarily utilizes EPA Part 75 Continuous Emissions Monitoring regulations for CO2 emissions data; Part 75 relies on the use of Continuous Emissions Monitoring Systems (CEMS) for exhaust flow and CO2 concentration (i.e., a direct measurement) at our coal fired units.

**Comment**

CO2 emissions for all coal-fired units and DE Karn Units 3, 4, A and B are determined according to 40 CFR 75.10(a)(3), which relies on the use of Continuous Emissions Monitoring Systems (CEMS) for exhaust flow and CO2 concentration (i.e., a direct measurement). CO2 emissions from the natural gas-fired utility units at the Jackson and Zeeland Generating Stations are based upon heat input determinations in accordance with 40 CFR Part 75, Appendix D and procedures in Section 2.3 of 40 CFR Part 75, Appendix G. For all other peaking units, CO2 emissions are based upon fuel usage data and the fuel heating values/CO2 emission factors in Table C-1 of 40 CFR Part 98, Subpart C. As applicable, CH4 and N2O emissions are calculated based upon heat input and emission factors from Table C-2 of 40 CFR Part 98, Subpart C. For the fossil fuel fired unit, expression of total greenhouse gas emissions as CO2 equivalents are based upon the global warming potentials in Table A-1 of 40 CFR Part 98, Subpart A.

**Distillate Oil**

**Emission factor**

**Unit**

Please select

**Emission factor source**

Consumers Energy primarily utilizes EPA Part 75 Continuous Emissions Monitoring regulations for CO2 emissions data; Part 75 relies on the use of Continuous Emissions Monitoring Systems (CEMS) for exhaust flow and CO2 concentration (i.e., a direct measurement) at our combined oil and gas fired units. For peaking units utilizing distillate oil, emissions data is based upon fuel usage data and the fuel heating values/CO2 emission factors in Table C-1 of 40 CFR Part 98, Subpart C.

**Comment**

CO2 emissions for all coal-fired units and DE Karn Units 3, 4, A and B are determined according to 40 CFR 75.10(a)(3), which relies on the use of Continuous Emissions Monitoring Systems (CEMS) for exhaust flow and CO2 concentration (i.e., a direct measurement). C8.2f
(C.8.2f) Provide details on the electricity, heat, steam and/or cooling amounts that were accounted for at a low-carbon emission factor in the market-based Scope 2 figure reported in C.6.3.

**Basis for applying a low-carbon emission factor**
No purchases or generation of low-carbon electricity, heat, steam or cooling accounted with a low-carbon emission factor

**Low-carbon technology type**
<Not Applicable>

**MWh consumed associated with low-carbon electricity, heat, steam or cooling**
<Not Applicable>

**Emission factor (in units of metric tons CO2e per MWh)**
<Not Applicable>

**Comment**
Consumers Energy does not specifically spend money on low carbon resources to run its own operations. Rather, the Company's energy consumption is characterized by that which is supplied to the grid.

---

**C-EU8.4**

(C-EU8.4) Does your electric utility organization have a global transmission and distribution business?
No

---

**C9. Additional metrics**

---

C11.3

(C11.3) Does your organization use an internal price on carbon?
No, and we do not currently anticipate doing so in the next two years

C12. Engagement

C12.1
(C12.1) Do you engage with your value chain on climate-related issues?
Yes, our customers

C12.1b

(C12.1b) Give details of your climate-related engagement strategy with your customers.

Type of engagement
Collaboration & innovation

Details of engagement
Run a campaign to encourage innovation to reduce climate change impacts

Size of engagement
10.6

% Scope 3 emissions as reported in C6.5
6.67

Please explain the rationale for selecting this group of customers and scope of engagement
Consumers Energy uses an integrated marketing approach to engage customers in our Energy Efficiency Programs. We have prioritized customer engagement due to its inherent business and societal value. This engagement reduces carbon emissions while creating business value through new products and services. Additionally, our energy efficiency programs save our customers money.

Impact of engagement, including measures of success
Ultimately, our engagement efforts are evaluated by the achievement of savings goals for both electricity and natural gas. In 2017, the lifetime GHG reductions associated with customers adoption of the gas utility energy optimization plans resulted in a lifetime reduction of 945,000 metric tons of CO2e emissions. The value reported represents the ratio of lifetime reductions (through 2017) to total Scope 3 emissions for 2017.

C12.3

(C12.3) Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?
Direct engagement with policy makers
Trade associations
Funding research organizations

C12.3a
### C12.3a On what issues have you been engaging directly with policy makers?

<td>Other, please specify (Emissions regulations on power plants)</td>
<td>Oppose</td>
<td>Consumers Energy staff has tracked EPA’s development of the Clean Power Plan (CPP) (regulations under the Section 111 of the CAA that target GHG emissions from Electric Generating Units (EGUs)). The CPP includes regulations that govern new and modified EGUs along with broadly regulating existing EGUs. In concert, the regulations set national emission standards for GHG emissions from any fossil fuel-fired EGU. Consumers Energy employs internal staff who participate in utility and industry based trade associations, and heavily participate in the administrative rulemaking process (notice and comment procedures). In February 2016, the Supreme Court of the United States placed a judicial stay on the CPP. Litigation efforts will continue for the next few years. Consumers Energy staff continue to work with state and federal entities to address how potential CPP implementation interacts with concurrent energy policy discussions.</td>
<td>While we support transitioning to cleaner fuel sources as infrastructure and economy allow, we believe that EPA’s EGU regulations could be improved. Consumers Energy will continue to participate in industry groups that comment on and educate EPA and the Michigan Department of Environmental Quality on the effects of such regulation on the electric utility industry. We will supplement those efforts with company specific input when necessary. Consumers Energy continues to advocate for any state or federal regulations, or guidelines, impacting existing EGUs to recognize prior investments in the generation fleet in order to not penalize any investments in carbon reductions prior to the rulemaking and to and to set a fair standard to be implemented on a reasonable timeline.</td>
</tr>
<tr>
<td>Clean energy generation</td>
<td>Support</td>
<td>In 2016, the State of Michigan passed new state energy policy, which became effective in April 2017. Consumers Energy staff participated in this research process via roundtable discussions, workgroups, and public presentations. Staff now are in the implementation phase of those new programs.</td>
<td>Consumers Energy supports the enacted state energy policy. We will continue to engage in legislative workgroups and discussions to best implement the revised mandates on utilities for energy efficiency and renewable energy.</td>

### C12.3b

(C12.3b) Are you on the board of any trade associations or do you provide funding beyond membership?

Yes

### C12.3c
Enter the details of those trade associations that are likely to take a position on climate change legislation.

**Trade association**
American Gas Association (AGA)

**Is your position on climate change consistent with theirs?**
Consistent

**Please explain the trade association’s position**
AGA believes that every discussion about clean energy standards should include natural gas—and that energy efficiency and reduced environmental impacts be considered primary criteria for the nation's climate and energy policies.

**How have you, or are you attempting to, influence the position?**
Consumers Energy participates in policy development activities as well as technical support activities initiated through AGA.

---

**Trade association**
Edison Electric Institute (EEI)

**Is your position on climate change consistent with theirs?**
Consistent

**Please explain the trade association’s position**
EEI member companies continue to support the goals of our nation’s environmental laws and are working to ensure that they are fully met. Further, EEI believes policies to address climate change should seek to minimize impacts on consumers and avoid harm to U.S. industry and the economy.

**How have you, or are you attempting to, influence the position?**
Consumers Energy participates in policy development activities as well as technical support activities initiated through EEI.

---

**Trade association**
Electric Power Research Institute (EPRI)

**Is your position on climate change consistent with theirs?**
Consistent

**Please explain the trade association’s position**
EPRI acknowledges that the energy industry is faced with unprecedented uncertainties around environmental regulation and climate policies. They have committed to developing tools and models to assist both the public and private sector decision makers in understanding the costs and benefits of policy alternatives.

**How have you, or are you attempting to, influence the position?**
Consumers Energy participates in policy development activities as well as technical support activities initiated through EPRI.

---

(C12.3d) Do you publicly disclose a list of all research organizations that you fund?
No

---

(C12.3f)
(C12.3f) What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?

Consumers Energy has staff that tracks and analyzes developments around climate change strategy. This group is housed in the corporate Environmental Services Department. Additionally, Consumers Energy has a Sustainability Program housed in our Government and Public Affairs Department, with supporting teams throughout the company. There is regular contact between the respective teams to discuss Company activities that may impact our climate change strategy. Additionally, we have governmental affairs staff that regularly engages with policy makers.

C12.4
(C12.4) Have you published information about your organization's response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).

SC1.1
 Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.

**Requesting member**
General Motors Company

**Scope of emissions**
Scope 1

**Emissions in metric tonnes of CO2e**
382848

**Uncertainty (±%)**
90

**Major sources of emissions**
The major source of the Scope 1 emissions attributed to General Motors is from the generation of electricity supplied to their facilities.

**Verified**
No

**Allocation method**
Allocation based on the energy content of products purchased

Please explain how you have identified the GHG source, including major limitations to this process and assumptions made
This value was calculated from the metered electricity usage for the GM customer accounts and a Consumers Energy specific emission factor for out delivered electricity.

---

**Requesting member**
General Motors Company

**Scope of emissions**
Scope 3

**Emissions in metric tonnes of CO2e**
3943

**Uncertainty (±%)**
90

**Major sources of emissions**
The major source of the Scope 3 emissions attributed to General Motors is from the combustion of Consumers Energy supplied natural gas at their facilities.

**Verified**
No

**Allocation method**
Allocation based on the energy content of products purchased

Please explain how you have identified the GHG source, including major limitations to this process and assumptions made
This value was calculated from the metered natural gas delivered to the GM customer accounts. Emission factors are from EPA Part 98 GHG reporting rule.

---

**SC1.2**

**(SC1.2) Where published information has been used in completing SC1.1, please provide a reference(s).**

---

**SC1.3**
What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

<table>
<thead>
<tr>
<th>Allocation challenges</th>
<th>Please explain what would help you overcome these challenges</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other, please specify</td>
<td>The nature of supplying energy to a regional base prevents Consumers Energy from being able to calculate customer specific emission factors. We can provide Consumers Energy specific emission factors, which is an average of all our generation sources emission profiles for our entire service territory.</td>
</tr>
</tbody>
</table>

SC1.4

Do you plan to develop your capabilities to allocate emissions to your customers in the future?
No

SC1.4b

Explain why you do not plan to develop capabilities to allocate emissions to your customers.

We currently provide this information on request basis to our customers. We do not have current plans to expand upon our capabilities.

SC2.1

Please propose any mutually beneficial climate-related projects you could collaborate on with specific CDP Supply Chain members.

SC2.2

Have requests or initiatives by CDP Supply Chain members prompted your organization to take organizational-level emissions reduction initiatives?
No

SC3.1

Do you want to enroll in the 2018-2019 CDP Action Exchange initiative?
No

SC3.2

Is your company a participating supplier in CDP’s 2017-2018 Action Exchange initiative?
No
(SC4.1) Are you providing product level data for your organization's goods or services, if so, what functionality will you be using?
Please select

SC4.2d

(SC4.2d) Have any of the initiatives described in SC4.2c been driven by requesting CDP Supply Chain members?
Please select

Submit your response

In which language are you submitting your response?
